IDENTIFIERS	*Seminole Community College FL

ABSTRACT

Consisting primarily of data tables and charts, this report on the Hunt Club Center (HCC) at Seminole Community College (SCC) in Sanford, Florida, presents information on course offerings and full-time equivalency (FTE) production for academic years 1987-88 through 1991-92; HCC area demographics; and student characteristics during fall terms 1990 and 1991, respectively. Study findings include the following: (1) the majority of courses, student enrollments, and FTE generation at HCC are for college credit; (2) college credit courses have had a greater enrolled class size than noncredit classes; (3) though sporadic, growth at HCC has been fueled primarily by evening classes; (4) generally, student FTE's increase in response to increases in course offerings; (5) HCC is located close to the highest growth areas in Orange and Seminole counties; (6) while the lower income areas of Orange county may resemble the more traditional sources of community college students, such areas have a much smaller population than their Seminole county equivalents, and targeting these Orange county areas may limit enrollment growth potential; (7) over 25% of HCC enrolled students are attending on a full-time basis and are enrolled in college-credit courses; (8) approximately 50% of HCC students also attend SCC; (9) in all types of courses, HCC students generated more FTE at HCC than at SCC; (10) the majority of HCC college credit and college preparatory students enrolled exclusively in evening classes, while the majority of continuing education and vocational/technical students enrolled exclusively in day classes; and (11) the HCC student body has a greater percentages of white students than SCC. EXECUTIVE SUMMARY

PART I

- Hunt Club in number of courses, students, and FTE generation is predominately college credit.

- College credit courses have been more successful in percentage that run and in enrolled class size.

- Primarily fueled by evening credit classes, Hunt Center growth has been sporadic.

- Generally, FTE increased in response to increased course offerings.

PART II

- Hunt Club Center is positioned close to the highest growth areas in Orange and Seminole counties.

- The lower income Orange county areas may resemble the more traditional sources of community college students. However these tracts have a much smaller population than their Seminole County equivalents and may limit growth potential.

PART III

- HC has primarily college credit and college preparatory enrollments, with over one-fourth full-time college-credit students.

- Around 50% of the college credit and college preparatory students attend both Hunt Club and the main campus.

- HC students in all course types earn more FTE at HC than at main campus.

- A very small percentage of adult/continuing ed and vocational/technical students attend both campuses.

- Majority of College credit/college preparatory students enrolled exclusively in evening classes.

- Majority of adult/continuing ed and vocational/technical students enrolled exclusively in day classes. many of the vocational/tecnical students were older women.

- Larger white HC student population and fewer blacks and Spanish, percentage-wise, than SCC as a whole.

- HC student females outnumber males by a higher percentage than SCC as a whole.

PART I
COURSE OFFERINGS AND FTE PRODUCTION

FORWARD

The following represents a summary of the enrollment patterns at the Hunt Club Center. It is based on class enrollment files accessed in February of 1992 which display class enrollments back to Term III of 1986-87. (The Center opened in Term II of 86-87.) It should be remembered that any changes made to these files since 86-87 will be reflected in this data and make the data slightly different from the original information. For the purposes of this work,though,the analysis represents an accurate portrayal of enrollment history.

The data presented in this study reflects four full year's experience at the Center plus a portion of 91-92 (through February 4, 1992). It is anticipated that this work will be followed up by a demographic analysis.

SUMMARY AND ANALYSIS

- Four course types have been offered at the Hunt Club Center: College Credit, College Preparatory, Adult & Continuing Education, and Vocation/Technical.

- The total number of courses initially offered at the Center in the period from 1987-88 to 1990-91 has a range of 367 to 425. In 1991-92 the number offered as of February 4, 1992 was 407, a drop from the 1990-91 figure of 425. (Although the number may rise by the end of the report year.) (see table 2)

- College Credit courses as of February 1992 represent over 70% of the FTE produced at the Center which has grown steadily from a low of 58% in 1988-89. The dominance of College Credit is more striking with evening courses as opposed to day. (see table 4)

- The tendency has been to increase the number of College Credit courses initially offered each year relative to the other course types, particularly in evening classes/Fall terms. (see table 3)

- From 1987-88 to 1989-90, when there have been more initial course offerings, the final FTE generated has also increased. This did not occur in 1990-91, or thus far in 1991-92, although the impact of the number of offered courses on FTE production and course cancellation will not be clear until the end of '91-92. (see table 1)

- In only two of the five years examined have the number of initial day course offerings or evening course offerings increased over the previous year. (see table 1)

- Despite fluctuations in number of course offerings and FTE output at the Hunt Club, its yearly FTE as a percentage of the total FTE of SCC has remained relatively constant at the 5% range after the first full year of operation (starting in '88-89.) (see table 1)

- Discounting College Prep (which represents only a small number of courses taught at the Center),from 1989-90 to present,College Credit courses run in the evening have had the highest percentage of courses offered that ran. (see table 2)

- Discounting College Prep (which represents only a small number of students), from 1987-88 to present College Credit has had a larger percentage of enrolled over potential students in evening courses relative to the other course types. (see table 5)

- After the initial year of 1987-88, the cost per FTE has decreased through 1989-90, but increased in 1990-91. When available, the 1991-92 cost data will indicate whether this rise is a trend. (see table 6)

OBSERVATIONS

The Hunt Club Center, since its inception, appears to have been fueled by evening Credit Courses. The growth has been somewhat sporadic as opposed to a straight linear increase. With the exception of 1990-91, the Center has increased FTE in response to increased course offerings. The demographic portion of the analysis should provide additional information.

PART II
HUNT CLUB AREA DEMOGRAPHICS

SUMMARY AND ANALYSIS

The following represents an analysis of the population areas in Seminole and Orange counties that surround the Hunt Club Satellite Center. The data are represented in census tracts(the smallest divisions for which such information is available) cross walked to zip codes and towns. The source of the information is the Market Profile Analysis prepared by Donnelley Marketing Information Services in 1990 and is based on 1990 estimates as opposed to actual 1990 Census data. We estimate the error factor to be slight.

The map representation displays the census tracts surrounding Hunt Club in the form of a rectangle enclosing parts of Seminole and Orange. Chart 1 contains the data for the Seminole target tracts and is followed by Chart 2 which describes the characteristics of all of the 45 Seminole County Tracts. In the same way, Chart 3 lists the Orange County Tracts in question and is followed by Chart 4 containing all of the Orange County tracts. The following points can be made relative to the data:

Relative to Seminole and Orange

(1) While both the surrounding Orange and Seminole county populations share the same age range (median age of approximately 30 1980) the median household income of the Seminole tracts in 1990 was higher than the Orange county ones. In addition, while the target tracts in both counties had high growth rates between 1980 and 90, the high growth tracts in Seminole had substantially larger populations than the high growth ones in Orange(see Charts 1 and 3).

Seminole County Specifically

(2) 3 of the 4 Seminole county census tracts surrounding Hunt Club were in the top 20% of all Seminole census tracts showing growth between 1980 and 1990(see Chart 1 and Chart 2).

(3) 2 of the 4 target tracts were within the top 10% of median household income for all Seminole tracts in 1990(see Chart 1 and Chart 2).

(4) 3 of the 4 surrounding tracts were within the top 20% of 1980 median age for all Seminole tracts(see Chart 1 and Chart 2).

Orange County Specifically

(5) 6 of the 10 Orange county census tracts surrounding Hunt Club were in the top 20% of all Orange census tracts showing growth between 1980 and 1990(see Chart 3 and Chart 4).

(6) The 6 high growth census tracts were in the top 40% of median

household income for all Orange tracts in 1990(see Chart 3 and Chart 4).

(7) The 6 high growth census tracts were within the top 20% of 1980 median age for all Orange tracts)see chart 3 and Chart 4).

Observations

The Hunt Club Satellite Center is positioned close to the highest growth areas in Orange and Seminole counties (1980-90). From a community college marketing standpoint, the lower income, Orange county areas adjoining Hunt Club may resemble the more traditional source of community college students. However these tracts have a much smaller population than their Seminole county equivalents and may therefore limit growth potential.

PART III
STUDENT PROFILE

Part I and II of the Hunt Club study dealt with course offerings and FTE production, and Hunt Club area demographics, respectively. Part III develops the Hunt Club student profile.

For Part III, IAR Office looked at two representative terms, Fall Term of 1990-1991 and 1991-92.

- Generally, the changes in racial/ethnic mix at Hunt Club (HC) in the two terms were minor. HC's racial/ethnic mix does not reflect the same pattern as Seminole Community College as a whole. See Tables 1 and 2.

  Within course type, vocational/technical had a higher percentage of females.

  Females account for 69% of the total HC enrollment, compared to 54% for the entire college in Term 911 and 52% in Term 901.

  Hunt Club has had a higher percentage of white enrollment (86% at HC in Term 911 and 87% in Term 901 compared to 80% for all of SCC.) Fewer blacks are represented with 3% at HC in both terms compared to 7% total SCC.

- Though percentages changed between the two terms, consistently a larger percentage of HC college credit students enrolled in HC evening classes while HC day classes attracted the higher percentages of HC adult/continuing ed and vocational/technical students. (See Table 3.)

  The percentages of all HC students enrolled in both HC day and evening classes remained about the same, with more than a fourth of the HC college credit students enrolled in both HC's day and evening classes.

  Around 50% of HC college credit students attended both main campus and HC, whereas the majority of HC adult/continuing ed and vocational/technical students attended Hunt Club exclusively.

- Hunt Club students generated more FTE in both terms at the Hunt Club than at the main campus in all course types. See Table 4.

  In both terms studied, at least 28% of the HC college credit students were full-time SCC students, and the majority were in the "traditional" college age bracket of under 25.

- Adult & continuing education and vocational/technical courses were taken primarily by students 40 and over. Tables 5 and 6 show the percentage distribution of HC students relative to their total SCC enrollment and portion of HC FTE earned.

Two full years, 1989-90 and 1990-91, were studied for HC students' residence by zip code. However, because of city/county overlap of some zip codes, 22% of the HC students' city/county of residence could not be determined in both years. Consequently these students are presented as a separate category. A Central Florida Zip Codes map from the Central Florida Phone Book, 1992, is provided for reference.

- The largest groups of HC students in all course types came from Seminole County. See Table 7 and 8.

- In both years, in the college credit and college preparatory courses (type 1), most students positively identified from Seminole County were under age 25. From Orange and Lake counties most HC college credit students were 25 or older.

- Over 50% of the HC student population from both Orange and Seminole counties in both terms were enrolled in college credit and college preparatory courses.

- Numbers of both HC adult & continuing education (type 3) and vocational/technical (type 4) students were overwhelmingly over age 25 from the major represented geographical areas.

- In the case of both Orange and Seminole counties the majority of HC students came from the targeted high growth zip codes surrounding Hunt Club. See Tables 9 and 10.
